

QUESTIONS

- Based on the data type you know only four types of variables in java.
 - Primitive variables
 - Reference variables
 - String variables
 - Array variables
- Primitive variables
 - are not reference variables
 - can store primitive data type like byte, short, int, long, float, double, etc.
 - are not reference variables
 - are not reference variables
- Reference variables
 - are not primitive variables
 - can store reference data type like String, array, etc.
 - are not primitive variables
 - are not primitive variables
- String variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
- Array variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables

ANSWERS

- Based on the data type you know only four types of variables in java.
 - Primitive variables
 - Reference variables
 - String variables
 - Array variables
- Primitive variables
 - are not reference variables
 - can store primitive data type like byte, short, int, long, float, double, etc.
 - are not reference variables
 - are not reference variables
- Reference variables
 - are not primitive variables
 - can store reference data type like String, array, etc.
 - are not primitive variables
 - are not primitive variables
- String variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
- Array variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables

EXPLANATIONS

- Based on the data type you know only four types of variables in java.
 - Primitive variables
 - Reference variables
 - String variables
 - Array variables
- Primitive variables
 - are not reference variables
 - can store primitive data type like byte, short, int, long, float, double, etc.
 - are not reference variables
 - are not reference variables
- Reference variables
 - are not primitive variables
 - can store reference data type like String, array, etc.
 - are not primitive variables
 - are not primitive variables
- String variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
- Array variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables
 - are not primitive variables

CONCLUSION

Based on the data type you know only four types of variables in java.

- Primitive variables
- Reference variables
- String variables
- Array variables

Primitive variables

- are not reference variables
- can store primitive data type like byte, short, int, long, float, double, etc.
- are not reference variables
- are not reference variables

Reference variables

- are not primitive variables
- can store reference data type like String, array, etc.
- are not primitive variables
- are not primitive variables

String variables

- are not primitive variables
- are not primitive variables
- are not primitive variables
- are not primitive variables

Array variables

- are not primitive variables
- are not primitive variables
- are not primitive variables
- are not primitive variables
